

# Programmable Blockchain

## BITCOIN

WAS CREATED ONLY FOR THE USE OF PAYMENTS

- Ethereum was first of it kind, general purpose programmable blockchain technology.
- Ethereum was created to expand blockchain's utility.
- Visionary: Vitalik Buterin and Gavin Wood

## WHAT ETH LACKS?

- Customization: Tailor-made solutions for unique business requirements.
- Extensibility: Continuous improvement and addition of features.
- Control: Design your own rules and transaction behaviour.

#### HYPERLEDGER FABRIC

- General-Purpose DLT/Blockchain
- Highly modular and configurable architecture
- An enterprise-level, open-source, permissioned blockchain platform.

#### **Smart Contract**

- Introduced by Nick Szabo in 1994.
- Agreement between two or more people in the form of computer program
- Business logic / protocol.
- Immutable and tamper-proof agreement with no intermediaries / third parties.

TRADITIONAL CONTRACT

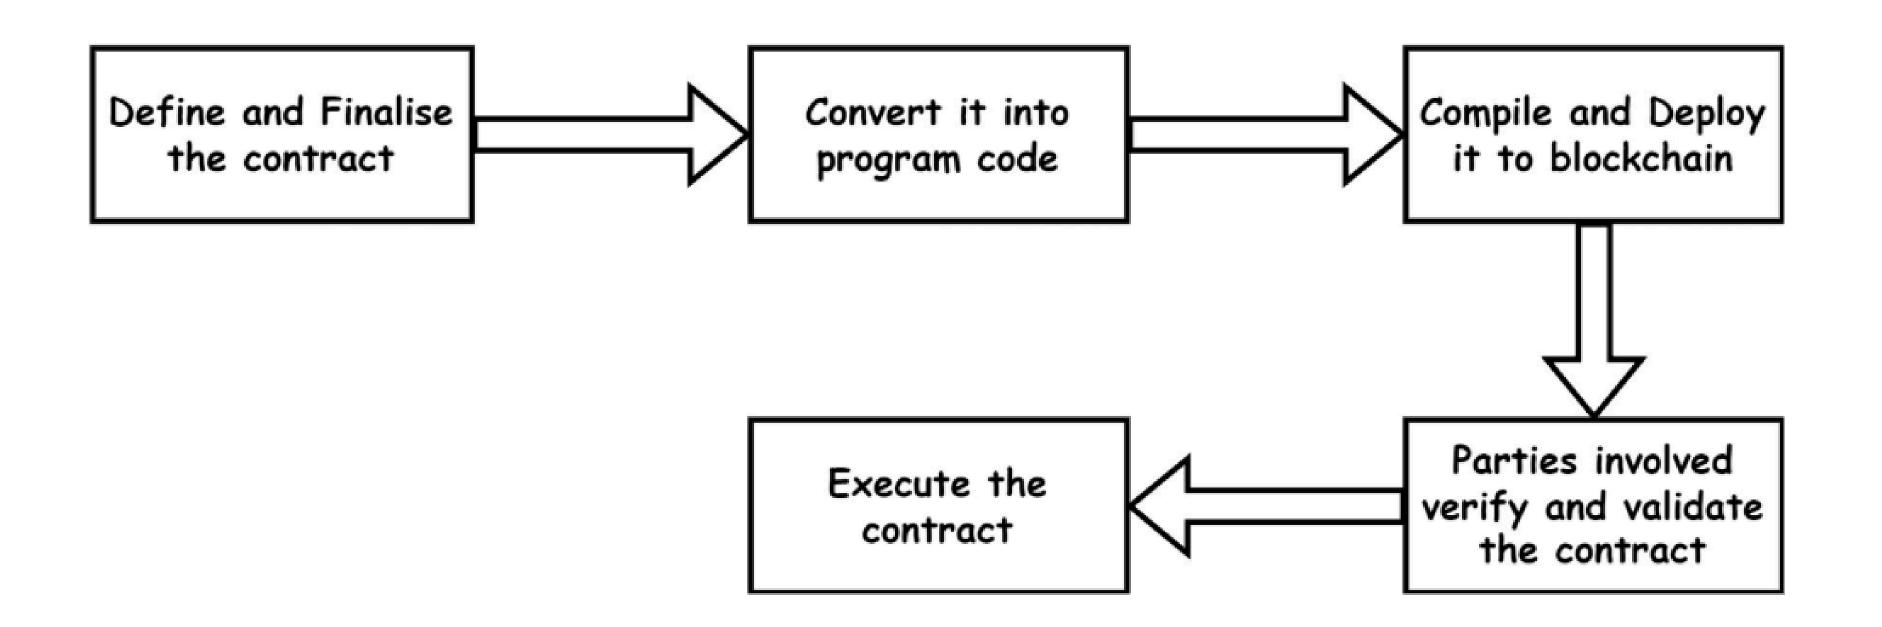

SMART CONTRACT

#### How Smart Contract Works?

#### Example

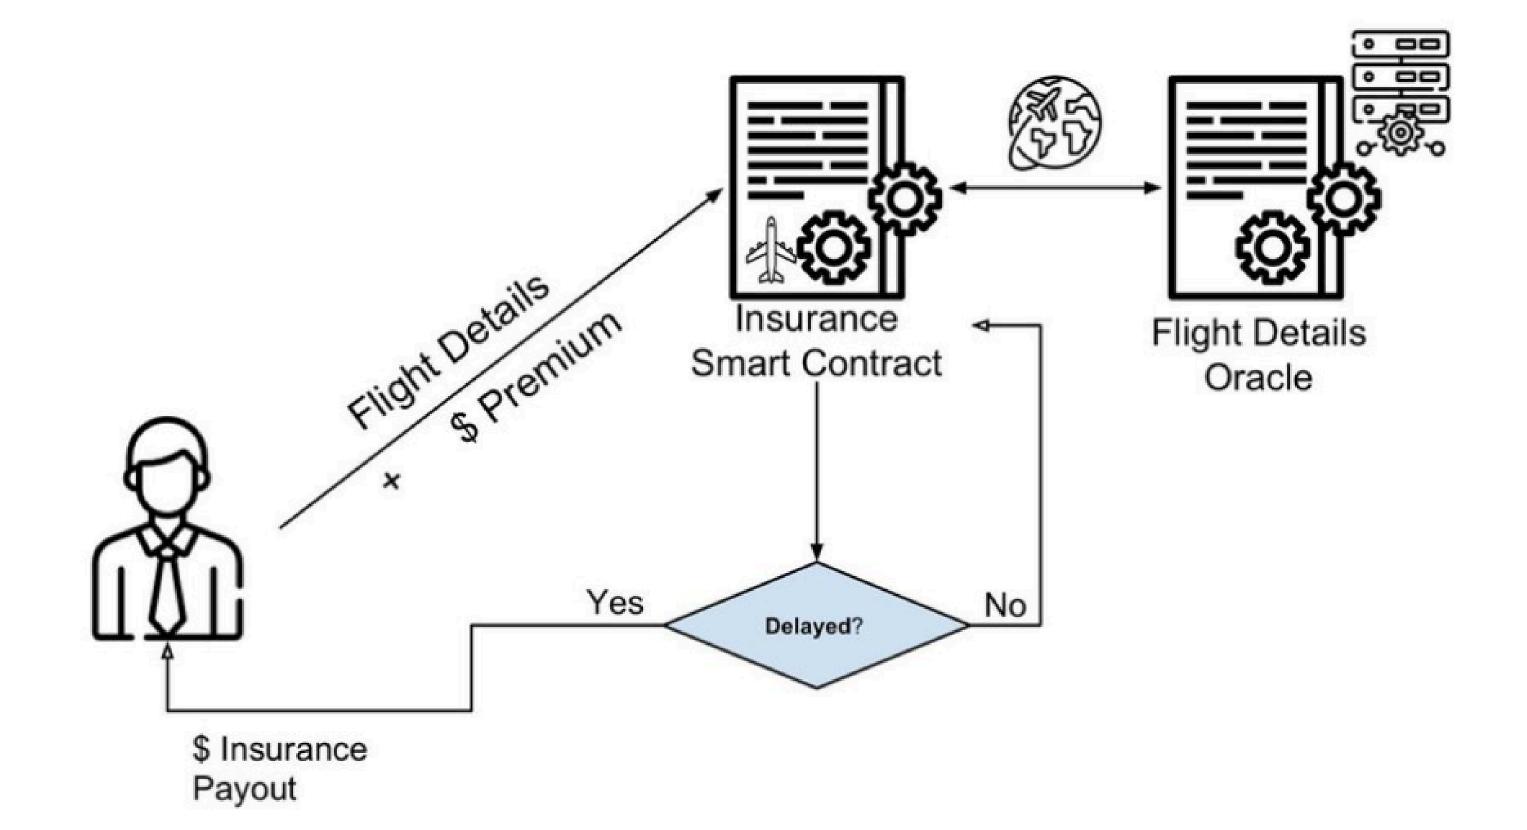

Alice travels from Mumbai to New york and needs an insurance of \$1000 for this tickets

#### SMART CONTRACT

- Alice deposit \$10 and Company deposit \$990.
- If the travel is completed successfully, the smart contract releases 1000 to the company's account.
- If the travel is disrupted due to any listed cases, the smart contract releases 1000 to Alice' account.

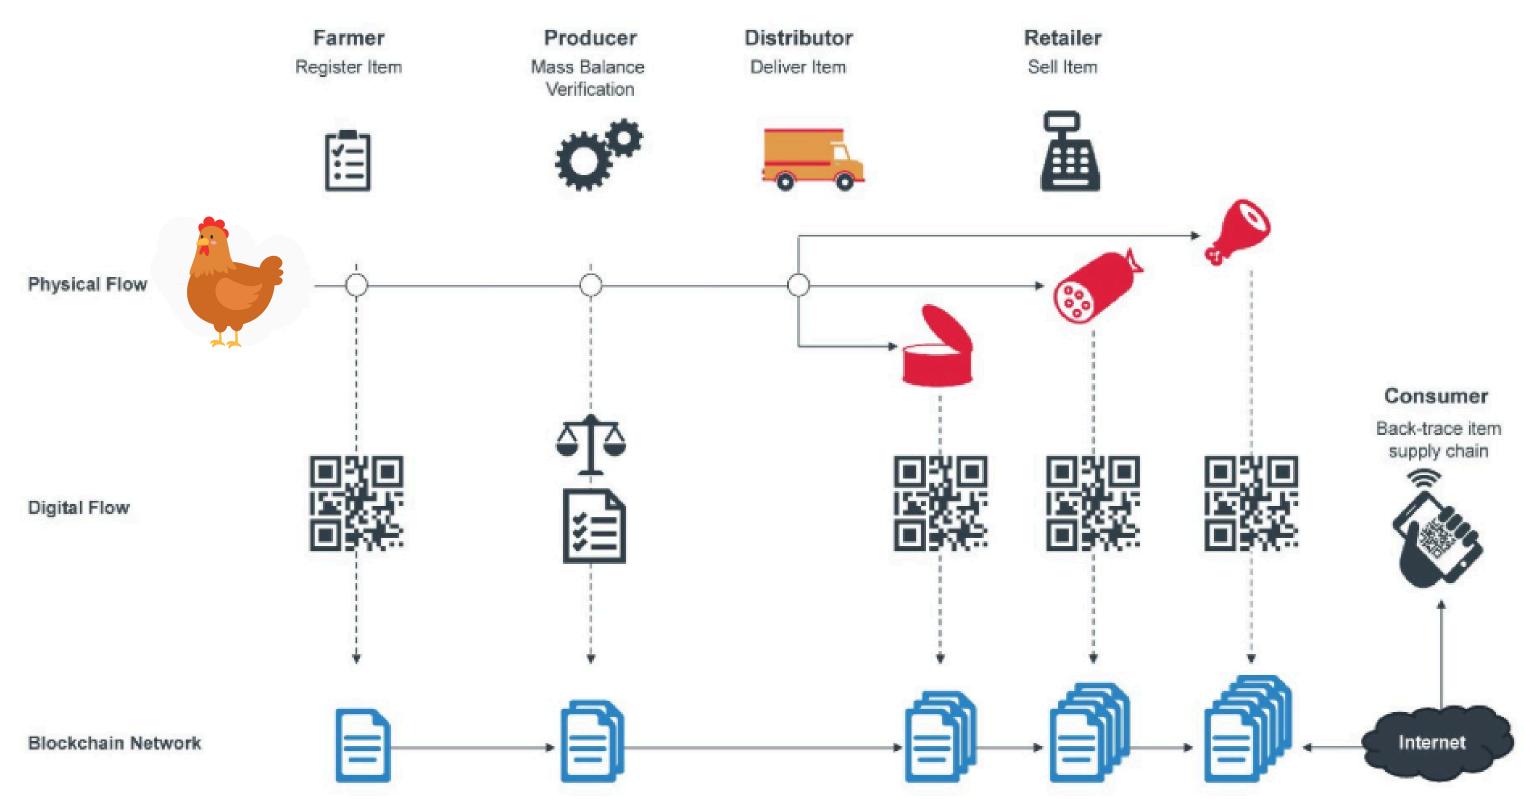

## Flight Delay Insurance Example

## Supply Chain Example

#### DeFi

DeFi is an umbrella term for financial services on public blockchains, primarily Ethereum.

- Open: Just need a crypto wallet.
- Pseudonymous: No KYC, No personal info.
- Flexible: Move your assets anywhere at any time, without asking for permission, no waiting time and expensive fees.
- Fast: Interest Rates and rewards often update rapidly.

#### Use Case

TRACE - Fund Traceability for Agricultural Development
